

## Investment Objective

The investment objective of the Systematic DLT Fund (the "Fund") is to maximise returns, regardless of the overall market performance of crypto assets. The actively-managed approach allows both long and short positions.

The Fund, an alternative investment fund (AIF) regulated in Liechtenstein, pursues a systematic, quantitative approach based on daily market prices of crypto assets. To fulfil its investment objective in the most secure and transparent way, the Fund invests into the Bitcoin and Ether futures at the CME to avoid the inherent risks associated with a direct investment. The investment strategy can be extended to other crypto assets as they become eligible for investment.

## Key Benefits

- Diversification from traditional investments
- Weekly liquidity
- Professional FINMA regulated asset manager
- Upside benefit, downside protection
- Regulated custodian bank
- Invest directly with fiat currency

(1) The actual Fund past performance shown is of the Class A USD unit class performance since inception on 17 Jan 2019. From July 2020, monthly performance is calculated as per last business day of the month.

(2) Bitcoin performance data is based on daily, excluding weekends, returns normalised from 17 Jan 2019 based on class A USD priced at 100 on fund inception on 17 Jan 2019.

**Past performance disclaimer.** Past performance does not guarantee future results. No guarantee is given by the Fund, the Alternative Investment Fund Manager and the Portfolio Manager that the investment objective of the Fund will be achieved. The investment return and principal value of an investment will fluctuate so that an investor's units, when redeemed, may be worth more or less than their original cost. The performance data do not take account of the commissions and costs incurred on the issue and redemption of units.

## Monthly Comment

In June the Systematic DLT Fund generated a return of -14.78%, leading to a performance of 184.65% since inception.

Selling amid concerns about regulatory crackdowns, tighter monetary policy, and environmental issues stabilized in June. During the entire month, bitcoin spent trading in a range with brief peaks above USD 40,000 and dips below USD 30,000.

Although the crypto market has faced a variety of headwinds recently, there have been various positive news on digital assets' journey towards the investment and commercial mainstream. [El Salvador](#) became the first country in the world to adopt Bitcoin as a legal tender and [MicroStrategy](#) purchased another USD 489 million worth of bitcoin.

Efforts to bring crypto assets under tighter supervision have done little to damp large investors' interest. On the contrary, at the end of the month, it became public that [Deutsche Börse Group has acquired a majority stake in Crypto Finance AG](#), extending its strategy towards digital assets.

**Dr. Hartmut Neff**  
Portfolio Manager

Dr. Neff previously worked at Amplitude Capital as a researcher on algorithmic trading systems. He worked as a PostDoc researcher in high energy quantum physics in Cyprus, Boston and London. He has a PhD in computational physics from Juelich/Wuppertal, Germany and studied Mathematics and Physics in Tuebingen, London and Bonn.

## Model

The Fund performance demonstrates the automated trading system, based on an algorithmic approach with long and short indicators. This system is limited to maximum 25% short exposures.

Investment decisions are made by means of generic, algorithmic filter analysis, which reduces the volatility of daily prices. This allows trends to be identified and exploited without additional subjective analysis parameters from the portfolio management team. The trend following strategies are stabilised by further quantitative methods, which include additional features of the price development. The model includes a variety of different technical methods, such as trend following and mean reversion. The model further includes additional short only indicators with the effect of efficiently reducing long exposure in a bearish market environment.

## Awards

## Risk and Rewards

The Fund is considered a high risk investment as the volatility of its returns is high. The Fund invests in crypto assets and is therefore subject to high volatility. This requires corresponding risk tolerance and capacity. The value of the Fund unit may fall below the purchase price. Legal, structural and market participant changes have an effect on the value of the portfolio. The Fund exclusively invests in less liquid assets that may be difficult to sell in distressed markets. Crypto assets are considered as carrying high risk profiles. A detailed and comprehensive list of risk descriptions can be found in the Prospectus available upon request.
