

Investment Objective

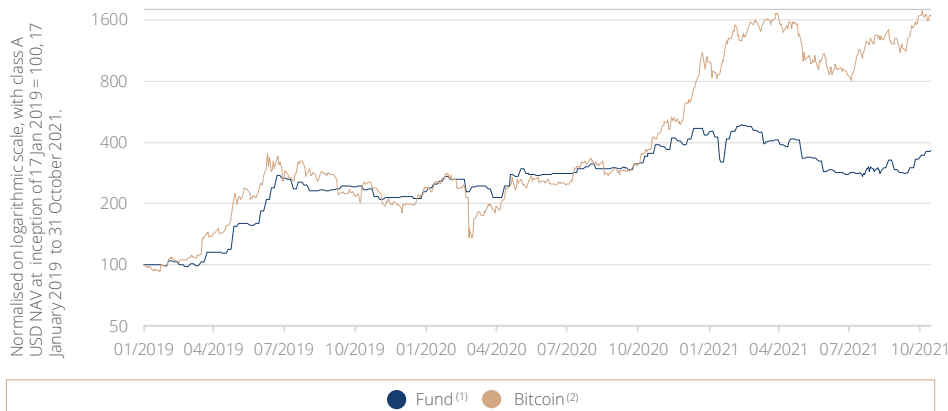

The investment objective of the Systematic DLT Fund (the "Fund") is to maximise returns, regardless of the overall market performance of crypto assets. The actively-managed approach allows both long and short positions.

The Fund, an alternative investment fund (AIF) regulated in Liechtenstein, pursues a systematic, quantitative approach based on daily market prices of crypto assets. To fulfil its investment objective in the most secure and transparent way, the Fund invests into the Bitcoin and Ether futures at the CME to avoid the inherent risks associated with a direct investment. The investment strategy can be extended to other crypto assets as they become eligible for investment.

Key Benefits

- Diversification from traditional investments
- Professional FINMA regulated asset manager
- Regulated custodian bank
- Weekly liquidity
- Upside benefit, downside protection
- Invest directly with fiat currency

Although certain information has been obtained from sources believed to be reliable, we do not guarantee its accuracy, completeness or fairness. We have relied upon and assumed without independent verification, the accuracy and completeness of all information available from public sources.

(1) The actual Fund past performance shown is of the Class A USD unit, class performance since inception on 17 Jan 2019. From July 2020, monthly performance is calculated as per last business day of the month.

(2) Bitcoin performance data is based on daily, excluding weekends, returns normalised from 17 Jan 2019 based on class A USD priced at 100 on fund inception on 17 Jan 2019.

Past performance disclaimer. Past performance does not guarantee future results. No guarantee is given by the Fund, the Alternative Investment Fund Manager and the Portfolio Manager that the investment objective of the Fund will be achieved. The investment return and principal value of an investment will fluctuate so that an investor's units, when redeemed, may be worth more or less than their original cost. The performance data do not take account of the commissions and costs incurred on the issue and redemption of units.

Monthly Comment

In October, the Systematic DLT Fund generated a return of 28.60%, leading to a performance of 265.86% since inception.

The digital asset market sentiment was clearly on the bullish side during October. Bitcoin and altcoins were able to reach new all-time highs and the crypto asset market capitalisation peaked. The Systematic DLT Fund participated with well-timed long positions in bitcoin and ether futures, which is reflected in its monthly performance.

Last month's lows brought up by negative news such as china's ban on cryptocurrency transactions did not hold back the market sentiment for too long. October started with Federal Reserve Chairman [Jerome Powell](#) announcing that the US had no plans to ban crypto assets, which turned the tables. On top of that, the SEC took a step closer to regulatory clarity on crypto assets by approving the [first bitcoin futures ETF](#) in the US by mid-October.

Dr. Hartmut Neff
Portfolio Manager

Dr. Neff previously worked at Amplitude Capital as a researcher on algorithmic trading systems. He worked as a PostDoc researcher in high energy quantum physics in Cyprus, Boston and London. He has a PhD in computational physics from Juelich/Wuppertal, Germany and studied Mathematics and Physics in Tuebingen, London and Bonn.

Model

The Fund performance demonstrates the automated trading system, based on an algorithmic approach with long and short indicators. This system is limited to maximum 25% short exposures.

Investment decisions are made by means of generic, algorithmic filter analysis, which reduces the volatility of daily prices. This allows trends to be identified and exploited without additional subjective analysis parameters from the portfolio management team. The trend following strategies are stabilised by further quantitative methods, which include additional features of the price development. The model includes a variety of different technical methods, such as trend following and mean reversion. The model further includes additional short only indicators with the effect of efficiently reducing long exposure in a bearish market environment.

Awards

Risk and Rewards

The Fund is considered a high risk investment as the volatility of its returns is high. The Fund invests in crypto assets and is therefore subject to high volatility. This requires corresponding risk tolerance and capacity. The value of the Fund unit may fall below the purchase price. Legal, structural and market participant changes have an effect on the value of the portfolio.

The Fund exclusively invests in less liquid assets that may be difficult to sell in distressed markets. Crypto assets are considered as carrying high risk profiles. A detailed and comprehensive list of risk descriptions can be found in the Prospectus available upon request.
