

STRATEGY

Constituents are selected on a discretionary basis within predefined criteria: with importance being placed on market capitalisation and return potential among others. Bitcoin and ether are currently the two largest crypto assets by market capitalisation; thus accounting for the largest part of the portfolio. The rest consists of smaller, yet still well established and prospective assets within the crypto space. On a quarterly basis, the constituents are re-evaluated and re-balanced in line with market developments; thus giving the portfolio time to perform and allowing it to evolve with the performance of digital assets.

THE PORTUNUS FUND

Digital assets are a new asset class enjoying rapid adoption. The current macroeconomic environment requires a diversification into non-correlated and untapped performance pools. However, it is still cumbersome to get professional, regulated, and bankable access to this new asset class.

We enable investors to get a diversified exposure to bitcoin, ether and other large digital assets through a regulated fund structure, managed by a FINMA-regulated asset manager, following a systematic approach with a quarterly rebalancing of the constituents.

INVESTMENT OBJECTIVE

The investment objective of the Portunus is to generate midterm to long term capital growth, by investing in a diversified portfolio of crypto assets following a discretionary approach with predefined criteria. The review and rebalancing of its constituents take place on a quarterly basis. This investment process provides investors with an exposure to a balanced and evolving portfolio within the crypto asset space.

RISK AND REWARDS

The Fund is considered to be a high-risk investment as the average return volatility is above conventional assets. Furthermore, crypto assets are based on a new technology that brings disruptive potential, but also unconventional risks. This requires a corresponding risk tolerance and capacity. The value of the Fund unit may fall below the purchase price. Legal, structural and market participant changes have an effect on the value of the portfolio. The Fund exclusively invests in less liquid assets that may be difficult to sell in distressed markets. Crypto assets are considered as carrying high risk profiles. A detailed and comprehensive list of risk descriptions can be found in the Prospectus available upon request.
